

Criterion F: Product evaluation and future product development

Client Evaluation:

See the other criterion F form.

Evaluation of specific criteria outlined in Criterion B

- a) The website must be easily navigable (i.e. working breadcrumbs, no 'dead end' pages, etc)
 - a. This criteria has been met. All pages of the site have access to the navigation bar, and have breadcrumbs can be followed upwards through the site hierarchy.
- b) Must display all of the required content (all of the testimonials pages and all of the Buddhist story pages)
 - a. All content that the client wished to be there is on the site.
- c) Can be displayed on multiple browsers (chrome, firefox, opera, safari, IE9+).
 - a. All five browsers on both Windows and Mac
- d) Is not susceptible to Cross Site Scripting (XSS) or SQL injection attacks.
 - a. To the best of my knowledge it is not. Risk has been minimized by sanitizing input from forms and user.
- e) Has a consistent aesthetic.
 - a. All sites follow a central stylesheet, creating a unified aesthetic

Recommendations for Future Development

The client is pleased with the site, and feels that it is both much more aesthetically appealing and much more intuitive than the previous iteration. She also feels that it "displays all the things that it needs to," and that it is generally adequate.

She has noted that she only feels that the website's visuals are adequate and has a few notions on how it can be improved (these aren't necessarily in the interview):

1. She'd like it to be more colorful and decorative. Specifically she doesn't really like the gradient mixing with the block color aesthetic in the menu bar.
2. She wants the site to be better on mobile. Right now there are a few graphical oddities on mobile views that should be corrected.
3. She wants more pictures on the site to make it look prettier (I wasn't provided any pictures, but it can be done if she provides me some)

Additionally, she would like to add a feature where the site would alert lineage members if there was an event coming up on either of the calendars, and give them the ability to tell her whether they can make the event. This likely can be done through a combination of a RSS feed and Google Calendar.
