Criterion C: Project schedule

Date	Action	Details	Comments and follow up	Date completed	Criterion
August 2014	confirmed project with Instructor	I checked with my instructor that it was ok to do a complete rebuild of another site. He said yes.	I cannot use any part of the original site apart from the content. I am constrained a bit (cannot look like the old one either) but I wouldn't want to have this site look like that anyways. I need to interview my client (I need to do it formally apparently)	August 18	A, B
August 2014	Interviewed client	I interviewed my client, Karen Carson, and we basically agreed that the old site is pretty bad and that it either needs a redesign or a complete redo.	Looking at the markup of the old site, I've found that the content is severely entangled with the CSS. This should be completely redone, since it's going to take a titanic effort just to edit all those pages anyways	August 20	A,B
Sept. 2014	Exploration	Playing around with different site configurations and checking them with my client.	It seems like she wants something rather simplistic. She likes the sans-serif sleek look generally (though also goes for a poshy serif look). It seems that in terms of organization I am probably going to have 'reader pages' that can take the text within a directory and transform it into the book-format that she wants it in. I do not	September 30	E-ish

			believe using a URL as a source form for this would be a wise idea, I don't feel comfortable that I can adequately filter out malicious URLs. I think that I should start the long process of ripping out the plaintext from the old website now. That might take a while even with sed and grep.		
Nov 2014	Design phase	Creating the design documents for my site	I think that I'm going to go for a simple one column view that is focused on the desktop. Next I need to create prototypes of all the pages (without coding or scripting yet).	November 31	D
Dec 2015	Site Skeleton complete	I created the html components of most pages (still working on the testimonials from the old site)	I lied about the scripting. I decided that it was probably a good idea to use PHP (I could have used SSI too I guess) to include auxiliary components to pages (standard header, metadata, and footer files). Just because I probably have forgotten something obvious and don't want to go through every page in order to fix it. Next up is to implement the SQL testimonial search.	December 27	E
Jan 2015	Completed search	I did the SQL language filter, search feature, and database page within the	This part could be a bit safer in terms of filtering (I should have had pre-rendered queries); however, the way it is right now is good enough and should be secure enough for our	January 20	E

		testimonials index	purposes.		
Jan 2015	Check in with client	Asked her to look at my work so far	She says its fine. I should continue work on the site. Next should be the reader pages.	January 25	B,C,F
Feb 2015	Reader Pages	I made a standard reader which displays files in the same directory as a book	It looks pretty good. I implemented all the buttons' functionalities and got them to disappear when they were useless Next should be finishing up getting the reader content (testimonials and Buddhist stories from the old site)	February 5	E
Feb 2015	Fixed dependency	Changed all elements so that non-JavaScript users could view pages	Its starting to become crunch time...	February 7	E
Feb 2015	Imported all reader pages	The reader pages are complete	Site is done	February 12	E
Feb 2015	Check in with client	She approves of the website	Need to upload to check for issues	February 20	B,F
Feb 2015	Testing	Testing of site for standards in Crit B	Generally performs fine, only Internet Explorer seems to have major troubles	February 30	B,E,F
March 2015	Interview with Client	Seeing how the site could be improved, etc	She gave recommendations on how the site could be improved. Most of these will be done after this project ends (considering its due on the 5th)	March 3	F
